

PR19 draft determinations – Developer services data request commentary

Due to the short timescales available to populate this table - with the final table definition only confirmed on 20th August - we have been unable to provide all the data to the level of accuracy we would normally seek for regulatory submissions. In particular row "B9" has been extrapolated from a limited sample, with a +/- 10-25% accuracy, so consistent with the old "C4" confidence grade.

In addition, in the time available, data has been cross checked back to supporting spreadsheets and files, but not all the way back to source systems.
