Water Resources Planning Tables 2019

v15 - June 2018

All queries on the content of this workbook should be sent to:

water-company-plan@environment-agency.gov.uk

Water resource zone information

Company:	Essex & Suffolk Water
Resource Zone Name:	Essex
Resource Zone Number:	1
Planning Scenario Name:	Dry Year Annual Average
Chosen Level of Service:	Planned
Base Year:	2016/17
Responsible Officer:	William Robinson
Version:	Draft Final

Signed: **William Robinson** **Dated:** 20/08/2018

[Digital signature is acceptable]

Key to cells

Clear cells - indicate an input is required

Yellow shaded cells - indicates a formula.

Blue shaded cells - indicate base year data.

Light grey shaded cells - indicate preceding years.

Dark grey cells - indicate that no data entry is required.

Worksheet	Content
WRZ summary	Supply-Demand Balance and components
1. BL Licences	Baseline water resources
2. BL Supply	Baseline water supplies
3. BL Demand	Baseline demand
4. BL SDB	Baseline supply demand balance
5. Feasible options	Fixed and Variable costs, Net Present Value, AIC and AISC of all feasible options (confidential)
6. Preferred options	High level costs of preferred options (Dry Year) - publicly available
7. FP Supply	Final Planning water supplies (impact of Scenario options)
8. FP Demand	Final Planning demand (impact of Scenario options)
9. FP SDB	Final Planning supply demand balance
10. Drought plan links	Drought plan links

Summary graphs of water resources planning tables data
Essex & Suffolk Water
Essex

Reported DO for WRMP tables highlighted in yellow

10.5 Summary report

WRMP DO Overview

Deployable output figures reported in this table are Essex WRZ WAFU figures. There is a large bulk import from Thames Water Utilities into Essex WRZ, and not including the import in this table would imply that there is a supply-balance deficit in the WRZ, which is not the case.
DO Approach - Aquator modelling was used for all surface water DO calculations. The English & Welsh method was used for the historic drought, and the Scottish method for the 1 in 200 year severe drought scenario. This is outlined in sections 3.2 and 3.3 of the WRMP.
The standard UKWIR methodology (1995) entitled "A Methodology for the Determination of Outputs for Groundwater Sources" was used to determine the DO of the groundwater sources. The regional groundwater model was used to determine the DO at groundwater sources during a 1 in 200-year drought scenario. The groundwater DO approach is outlined in sections 3.6 and 3.7 of the WRMP.
LoS - the planned levels of service for our customers are 1 in 20 years for temporary use bans, 1 in 50 years for drought order bans, and 1 in 250 years for pressure reduction.
Constraint on DO - our deployable output is licence-constrained, with the exception of one groundwater sources, which is aquifer constrained.
Critical Year - our worst historical drought year in the Essex WRZ is 1921.
Data length & quality - we have 107-year naturalised river flow series covering 1910-2016. The derviation of these series is covered in section 3.2.3 of the WRMP.
Approach to drought severity - estimation of drought severity was carried out using analysis of rainfall data and Tabony tables, outlined in section 2.9.1 of the WRMP.

Drought Plan Overview

The supply and demand side measures included within our Drought Plan are listed below, alongside their associated daily benefit (as a reduction in demand or increase in yield).

Additional Drought Scenarios

Drought scenarios chosen and justification - a severe (1 in 200 year) drought scenario was analysed for our surface water sources using the Aquator Scottish method and annual failure analysis, outlined in section 3.3 of the WRMP. The same severity drought was analysed for our groundwater sources using the groundwater regional model, outlined in section 3.7 of our WRMP.

Drought Supply Measures and Demand Restrictions Further Details

Demand – Appeals for restraint – 7% demand reduction
Demand – Temporary use ban – further 5% demand reduction
Demand – Drought order ban – further 2% demand reduction
Supply – Increased bulk transfers from Thames Water Utilities – benefit not known
Supply – Increased abstraction from SAGS – benefit not known
Supply – Reduction of compensation flow from Hanningfield reservoir – benefit not known

Impact on Supply Demand

We have not included any supply side drought measures in WRMP deployable output assessments, but demand side restrictions are taken into account. Only Level 1 and 2 demand restrictions are enforced in modelling of our worst historic drought and severe drought scenario.

Demands

We have used the Dry Year Distribution Input figures for base year 2016/17 as the Unrestricted Demand. Restricted Demand is the Unrestricted Demand minus the 12% demand reduction from Level 1 and 2 restrictions.

REF: WRMP19 Table instructions REVISED May 2017v16

2.3 Making changes to the WRP tables

Please see below slight changes to the WRP tables

Structure: no changes

Content: see below

Table	Row ref	Component	Derivaion	Unit	DP	What has been amended	Reasoning	
2	7BL	Deployable Output (baseline profile withou	sum(0.1Bl+0.2BL+0.3BL+0.4BL)	Ml/d	2	Formula has been removed, this row is **Input** from Supply data	DO is calculated for consistancy on Supply calculations, DO is not sum of licences	amended final v
9	11FP	Distribution Input	19FP+20FP+21FP+22FP+32FP+33FP+39FP	Ml/d	2	Void SPL removed row 38 from calculation, NWL/ESW following UKWIR/NRA WR1 demand forecasting methodology, void usage which inlcudes SPL is included in Water unbilled. So to not double count this volume of water Void SPL has been removed from the total DI calculation. Unbilled contains both void usage as well as SPL, this row is already included in the DI calculation.	Consistency between WRP and water balance assumptions/calculations Following UKWIR/NRA WR1 demand forecasting methodology. Reflects WRMP report Void SPL ranges from 0.01% to 0.3% of DI	amended final v
4	11BL	Distribution input	19BL+20BL+21BL+22BL+32BL+33BL+3	Ml/d	2	As above	As above	amended final v
8	30FP	Unmeasured Household - PCC	(26FP*1,000,000)/(52FP*1,000)	l/h/d	1	Formula amended to 1 decimal place rather than 0 as per table requirement New '=ROUND((H10*1000000)/(H55*1000),1) Old '=ROUND((H10*1000000)/(H55*1000),1)	For consistency between BL/FB as well as complying with table requirements	
8	29FP	Measured Household - PCC	(25FP*1,000,000)/(51FP*1,000)	l/h/d	1	As above	For consistency between BL/FB as well as complying with table requirements	
2	8.21BL+	Total for the zone	Input (zero or negative number)	Ml/d	2	Row reference	The row reference is a duplicate of 8.2 ie there are two 8.2's so one has been amended to 8.21 to enable an accurate data load of the tables.	amended final v
7	1FP	Raw Water Abstracted	1BL	Ml/d	2	FP should be different than = BP Input from Final Supply demand (DI for BL and FP are different) which means BL and FP raw water abstracted will be different figures	Final plan DI + raw water imports - raw water exports + process losses should = Final Plan Raw water abstracted	amended final v
6	61.4	Change volume delivered to unmeasured households (input reductions as -ve)	-	Ml/d	2	The volume associated in the row if consumption rather than the previous water delivered, changes made due to the version 15 including SPL to the water delivered figure		
6	61.3	Change volume delivered to measured households (input reductions as -ve)	-	Ml/d	2	The volume associated in the row if consumption rather than the previous water delivered, changes made due to the version 15 including SPL to the water delivered figure
