10.5 Summary report

WRMP DO Overview

DO Approach - The Blyth WRZ only contains groundwater sources. The standard UKWIR methodology (1995) entitled "A Methodology for the Determination of Outputs for Groundwater Sources" was used to determine the DO of the groundwater sources. The regional groundwater model was used to determine the DO at groundwater sources during a 1 in 200-year drought scenario. This is outlined in sections 3.6 and 3.7 of the WRMP.
LoS - the planned levels of service for our customers are 1 in 20 years for temporary use bans, 1 in 50 years for drought order bans, and 1 in 250 years for pressure reduction.
Constraint on DO - our deployable output is licence-constrained.
Critical Year - our worst historical drought year in Suffolk is 1997.
Data length & quality - The data length and quality varies between sources.
Approach to drought severity - estimation of drought severity was carried out using analysis of rainfall data and Tabony tables, outlined in section 2.9.1 of the WRMP.

Drought Plan Overview

The supply and demand side measures included within our Drought Plan are listed below, alongside their associated daily benefit (as a reduction in demand or increase in yield).

Additional Drought Scenarios

Drought scenarios chosen and justification - A severe (1 in 200 year) drought scenario was analysed for our groundwater sources using the regional groundwater model. This is outlined in section 3.7 of our WRMP.

Drought Supply Measures and Demand Restrictions Further Details

Demand – Appeals for restraint – 7% demand reduction
Demand – Temporary use ban – further 5% demand reduction
Demand – Drought order ban – further 2% demand reduction
Supply – Increase restricting daily quantity on Blyth Borehole 6 licence – 0.29Ml/d benefit
Supply – Reduction of compensation flows from Blyth Borehole 2 – up to 0.205Ml/d benefit between July and October
Supply – Tankering

Impact on Supply Demand

We have not included any supply side drought measures in WRMP deployable output assessments, but demand side restrictions are taken into account. Only Level 1 and 2 demand restrictions were enforced our worst historic drought.

Demands

We have used the Dry Year Distribution Input figures for base year 2016/17 as the Unrestricted Demand. Restricted Demand is the Unrestricted Demand minus the 12% demand reduction from Level 1 and 2 restrictions.
